

25G-PSU-1600 (1200)

Additional Power Supply for Redundancy

Part No: 9121 0006

Features

- Up to N+2 redundancy
- 24/7 operation

Power supplies are arranged for N+1 or N+2 redundancy. Depending on the configuration, one or even two power lines can fail while the system still remains active. In addition, our approach to power supplies is to ensure that the load never exceeds 60% of their maximum rated output level. These two features will go a long way providing a robust system capable of 24/7 operation in even the most demanding environments.
